AxonIQ Console

Complete Insight and Management for the AxonIQ Stack

The AxonIQ product stack empowers developers to design, develop, and run message-driven applications using Command Query Responsibility Separation (CQRS), Event Sourcing (ES), and Message-Driven Architecture.

Users can focus on functionality first and leave the non-functional requirements to us. AxonIQ Console provides a user interface for the management of Axon Framework-based applications and Axon Server, either on-premise or running in a variety of clouds or marketplaces.
